

Enterprise JavaScript Meets Enterprise Security

Key Business Benefits

Protect IP and important algorithms that are vital to your competitive advantage, by preventing reverse engineering.

Minimize exposure to data breaches, by preventing attackers from retrieving the code that handles authentication or sensitive operations.

Enforce licensing agreements, by ensuring your code can't be changed by attackers attempting to bypass restrictions.

Easily integrate with your SIEM to maximize your organization's ability to respond to threats in real-time.

Jscrambler secures the client-side of your application

Polymorphic JavaScript Obfuscation

Jscrambler is the only solution that offers Enterprise-grade polymorphic JavaScript obfuscation, transforming your code so that it's extremely hard to reverse-engineer.

JavaScript Code Locks

Jscrambler goes way beyond obfuscation, with varying application locks that restrict when, where and by whom your JavaScript Application can be executed.

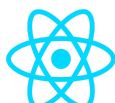

Self-Defending Capabilities and Countermeasures

When your protected code faces a debugging or tampering attempt, Jscrambler's integrity checks break the application or trigger a countermeasure specified by you.

Real-Time Notifications

Jscrambler warns you if your JavaScript Code is being debugged, tampered, or used outside a code lock, enabling you to immediately take any supplementary actions.

Compatible with the Main Frameworks and Stacks

Trusted by the Fortune 500 and 43000+ companies and individuals globally.
