

Pioneering Client-Side Protection and Compliance Platform

Jscrambler is the pioneering platform for Client-Side Protection and Compliance. Jscrambler offers an exclusive blend of cutting-edge first-party JavaScript obfuscation and state-of-the-art third-party tag protection, enabling your business to keep on innovating online securely.

Protect every website component, from first-party code to third-party tags

IP Theft Prevention

With Jscrambler's polymorphic obfuscation, code locks, and runtime protection, attackers won't be able to reverse engineer, debug, or tamper with the code of your web/mobile app.

If someone tries to tamper with your protected code and steal IP or avoid licensing, Jscrambler's Code Integrity sets in motion self-defending capabilities and countermeasures to stop the attack.

Third-Party Script Control

Gain fine-grained control over third-party tags and ensure full client-side protection against digital skimming attacks. Get real-time visibility of all scripts running on your website and determine who can access and transfer data.

Reduce exposure to third-party risk with real-time detection and mitigation of compromised third-party scripts that leak data.

PCI DSS v4 Compliance

Jscrambler enables simple and scalable PCI DSS compliance by authorizing, protecting, and monitoring payment page scripts.

Jscrambler goes beyond just meeting the PCI DSS v4 requirements 6.4.3 and 11.6.1 by facilitating visibility, risk management, and control over all scripts. It alerts to changes to third-party tags, calling out potential data theft risks.

Gain full client-side visibility: Eliminate blind spots on the client side and get better situational awareness of your organization's security posture.

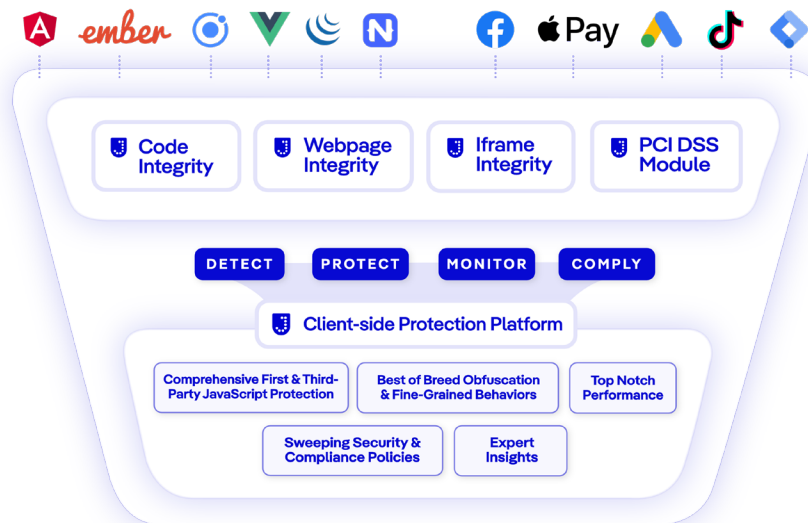

Seamlessly integrate with your tech stack: Easily integrate Jscrambler with all the main JavaScript frameworks, tech stacks, and SIEM of your choice.

Get more control without increasing demands on security staff: Rely on company-wide client-side security policies and work preventatively in the background, without creating extra work for your teams.

Enjoy peace of mind: Sleep easier at night, knowing you are protected by the security solution of choice for 30,000 satisfied users, from startups to Fortune 500 companies.

Giving businesses the freedom to innovate securely

“Would I recommend Jscrambler to other companies? Without a doubt. It’s my go-to choice for client-side web application protection.”

Director of Product Security at Fortune 500 Retail Company

“From what I see, Jscrambler is the most complete solution there is. Not only does it offer monitoring, it provides us with comprehensive protection for forms and scripts. We sleep easier at night because we know that the people at Jscrambler are looking out for us and our clients.”
