

Jscrambler Solution for Travel & Hospitality Companies

Jscrambler offers comprehensive client-side protection for travel and hospitality brands to prevent data leakage, web skimming, and Magecart attacks across booking engines, loyalty portals, and payment flows.

The Threat Landscape in Travel & Hospitality

With **\$4.67M** as the average cost of a data breach in the travel and hospitality sector, platforms can no longer leave front-end operations unprotected. Critical services, such as search, booking, dynamic pricing, loyalty accounts, identity verification, and AI personalization, execute client-side alongside **60+** third-party scripts. Traveler identity data, payment credentials, and pricing logic converge in the browser, where revenue optimization, brand trust, and **PCI DSS v4 compliance** intersect during every session.

Control Third-Party Pixels and Prevent Traveler Data Leakage

Continuously inventory every third-party script executing across booking flows and loyalty portals, enforce least-privilege access to payment and identity fields, and block unauthorized data access during live sessions, before sensitive traveler data leaves the page.

Protect Booking and Payment Pages Against Skimming

Protect payment forms and checkout flows from Magecart-style skimming and formjacking attacks by restricting which scripts can read or access data entered by travelers, and blocking outbound transmission to unapproved destinations.

Preserve the Integrity of Pricing and Booking Workflows

Harden dynamic pricing logic, booking validation rules, loyalty enforcement mechanisms, and client-side fraud controls against reverse engineering and tampering, so your commercial logic and competitive margins stay yours.

Govern Vendor and AI Data Collection During Live Booking

Restrict what advertising pixels, analytics tools, and embedded AI services collect during live traveler sessions, preventing unauthorized extraction of pricing signals, booking intent, loyalty data, and behavioral context into third-party platforms.

"It took us 9 months to discover every single web-based page where we accept credit cards — that just speaks to the complexity of our organization. We haven't found anything else in the market that directly meets the PCI requirements with the ease of use that Jscrambler provides."

— TJ Goldsmith, PCI Compliance Program Director at Marriott Vacations Worldwide
